APPLICATIONS DEVELOPED

Run Tracker – Live | GitHub
- An application that keeps track of distance, time, pace, and calories burned while the user is running; then it provides statistical analysis on the user's current and past runs saved.
- Utilized **React**, **JSX**, **JavaScript**, **HTML5**, **CSS3**, and **Bootstrap4** to build front-end functionalities and responsive designs.
- Collaborated with a team of developers to coordinate client-side calls through **Axios** to a **PHP** back-end tying into a **MySQL** Database.
- Integrated Google Maps and Geolocation **APIs** to track the user's location and run distance and Chart.js to display the statistics.
- Weekly standups and Meistertask used to keep track of project developed with agile methodology.

California National Park Finder – Live | GitHub
- An application that provides information (news, weather, and images) about the user's choice of a California National Park.
- Utilized data from the first **API** request's **JSON** response to call three more API requests.
- APIs used – Google Maps, News, Imgur, and Dark Sky.
- Built using **JavaScript** with **jQuery** to dynamically create most elements.
- Used **HTML5** to create basic skeleton and **Bootstrap** to aide in mobile responsiveness.

Memory Match Game – Live | GitHub
- A matching game to test the player's memory. In a deck of paired cards, the player needs to match each pair to win the game.
- Incorporated **jQuery** to dynamically create and display the game board and **CSS** to enhance **UI/UX** design.
